modoboa-postfix-autoreply Documentation

Release 1.3.0

Antoine Nguyen

Oct 17, 2018

Contents

This extension lets users define an auto-reply message (*vacation*). It is based on Postfix capabilities.

Contents:

CHAPTER 1

Setup

The user that executes the autoreply script needs to access `settings.py`. You must apply proper permissions on this file. For example, if `settings.py` belongs to `www-data:www-data`, you can add the `vmail` user to the `www-data` group and set the read permission for the group.

To make Postfix use this feature, you need to update your configuration file as follows:

`/etc/postfix/master.cf`:

```
autoreply unix         -        n        n        -        -        pipe
          flags= user=vmail:<group> argv=python <modoboa_site>/manage.py autoreply
↪$sender $mailbox
```

Replace `<driver>` by the name of the database you use. `<modoboa_site>` is the path of your Modoboa instance.

Note: Auto-reply messages are just sent once per sender for a pre-defined time period. By default, this period is equal to 1 day (86400s), you can adjust this value by modifying the **Automatic reply timeout** parameter available in the online panel.
