**1 Setup**

**3**

This extension lets users create server-side message filters, using the [sievefilter module](#) (which provides Sieve and ManageSieve clients).

Two different modes are available:

- A raw mode: you create filters using the Sieve language directly (advanced users)
- An assisted mode: you create filters using an intuitive form

# CHAPTER 1

---

## Setup

---

To use this extension, your hosting setup must include a *ManageSieve* server and your local delivery agent must understand the *Sieve* language. Don't panic, Dovecot supports both :- (refer to [Dovecot](#) to know how to enable those features).

Go the online panel and modify the following parameters in order to communicate with the *ManageSieve* server:

Name	Description	Default value
Server address	Address of your MANAGESIEVE server	127.0.0.1
Server port	Listening port of your MANAGESIEVE server	4190
Connect using STARTTLS	Use the STARTTLS extension	no
Authentication mechanism	Prefered authentication mechanism	auto

You also need to indicate where your *IMAP* server is:

Name	Description	Default value
Server address	Address of your IMAP server	127.0.0.1
Use a secured connection	Use a secured connection to access IMAP server	no
Server port	Listening port of your IMAP server	143
