May 06, 2017

Contents

1 Indices and tables

3

Module metadata manipulation library.

A python library for manipulation of the proposed module metadata format.

Example usage:

```
import modulemd
mmd = modulemd.ModuleMetadata()
mmd.load("metadata.yaml")
mmd.add_module_license("ISC")
mmd.components.clear_rpms()
mmd.components.add_rpm("example", "with reason", multilib=["x86_64"])
mmd.dump("out.yaml")
```

CHAPTER 1

Indices and tables

- `genindex`
- `modindex`
- `search`
