
MorseCode Documentation

Release 0.0.1

Tyndyll

December 01, 2014

1	Documentation	3
1.1	Morse API	3
1.2	Telegraph	3
1.3	Exceptions	3
1.4	Changes	3

`morse` is a Python package to generate Morse Code tones from Python code. “Morse code is a method of transmitting text information as a series of on-off tones, lights, or clicks that can be directly understood by a skilled listener or observer without special equipment” (from http://en.wikipedia.org/wiki/Morse_Code).

It consists of the following main modules:

- `morse.code`: This is the primary library for generating tones. Using this module provides access to a writer and an audio object
- `morse.alphabet`: This library lists the available alphabets which can be used to generate the output tones. Currently the only alphabet available is the “International” alphabet

1.1 Morse API

1.2 Telegraph

1.2.1 TelegraphWriter

1.2.2 TelegraphPlayer

1.3 Exceptions

1.4 Changes

1.4.1 Version 0.1 (2013-11-21)
