# CHAPTER 1

---

## Overview

---

docs	
tests	
package	

A library to process and translate open energy metadata.

- Free software: AGPL-3.0

### 1.1 Installation

```
pip install omi
```

### 1.2 Documentation

<https://omi.readthedocs.io/>

### 1.3 Development

To run the all tests run:

```
tox
```

Note, to combine the coverage data from all the tox environments run:

Windows	set PYTEST_ADDOPTS=--cov-append tox
Other	PYTEST_ADDOPTS=--cov-append tox

# CHAPTER 2

---

## Installation

---

At the command line:

```
pip install omi
```

# CHAPTER 3

---

## Usage

---

### 3.1 omi

```
omi [OPTIONS] COMMAND [ARGS]...
```

#### 3.1.1 translate

```
omi translate [OPTIONS] FILE_PATH
```

##### Options

**-f <f>**  
Dialect of the input

**-t <t>**  
Dialect to translate to

**-o <o>**  
Output file

##### Arguments

**FILE\_PATH**  
Required argument

To use omi in a project:

```
import omi
```

# CHAPTER 4

---

Reference

---

## 4.1 omi

# CHAPTER 5

---

## Contributing

---

Contributions are welcome, and they are greatly appreciated! Every little bit helps, and credit will always be given.

### 5.1 Bug reports

When reporting a bug please include:

- Your operating system name and version.
- Any details about your local setup that might be helpful in troubleshooting.
- Detailed steps to reproduce the bug.

### 5.2 Documentation improvements

omi could always use more documentation, whether as part of the official omi docs, in docstrings, or even on the web in blog posts, articles, and such.

### 5.3 Feature requests and feedback

The best way to send feedback is to file an issue at <https://github.com/OpenEnergyPlatform/omi/issues>.

If you are proposing a feature:

- Explain in detail how it would work.
- Keep the scope as narrow as possible, to make it easier to implement.
- Remember that this is a volunteer-driven project, and that code contributions are welcome :)

## 5.4 Development

To set up *omi* for local development:

1. Fork [omi](#) (look for the “Fork” button).
2. Clone your fork locally:

```
git clone git@github.com:your_name_here/omi.git
```

3. Create a branch for local development:

```
git checkout -b name-of-your-bugfix-or-feature
```

Now you can make your changes locally.

4. When you’re done making changes, run all the checks, doc builder and spell checker with [tox](#) one command:

```
tox
```

5. Commit your changes and push your branch to GitHub:

```
git add .  
git commit -m "Your detailed description of your changes."  
git push origin name-of-your-bugfix-or-feature
```

6. Submit a pull request through the GitHub website.

### 5.4.1 Pull Request Guidelines

If you need some code review or feedback while you’re developing the code just make the pull request.

For merging, you should:

1. Include passing tests (run [tox](#))<sup>1</sup>.
2. Update documentation when there’s new API, functionality etc.
3. Add a note to `CHANGELOG.rst` about the changes.
4. Add yourself to `AUTHORS.rst`.

### 5.4.2 Tips

To run a subset of tests:

```
tox -e envname -- pytest -k test_myfeature
```

To run all the test environments in *parallel* (you need to `pip install detox`):

```
detox
```

---

<sup>1</sup> If you don’t have all the necessary python versions available locally you can rely on Travis - it will [run the tests](#) for each change you add in the pull request.

It will be slower though ...

# CHAPTER 6

---

## Authors

---

- Martin Glauer - openenergy-platform.org

# CHAPTER 7

---

## Changelog

---

### 7.1 0.0.0 (2019-01-28)

- First release on PyPI.

# CHAPTER 8

---

## Indices and tables

---

- genindex
- modindex
- search

---

## Python Module Index
