# **py<sub>t</sub>ools***Documentation*

***Release 0.1.0***

**Thorsten Beier**

**Jul 30, 2019**

**CONTENTS:**

<b>1</b>	<b>py_tools</b>	<b>1</b>
1.1	Features . . . . .	1
<b>2</b>	<b>Installation</b>	<b>3</b>
<b>3</b>	<b>Usage</b>	<b>5</b>
<b>4</b>	<b>Examples</b>	<b>7</b>
4.1	This is my example script . . . . .	7
4.2	This is my example script . . . . .	8
<b>5</b>	<b>This is my example script</b>	<b>11</b>
<b>6</b>	<b>API</b>	<b>13</b>
6.1	py_tools . . . . .	13
<b>7</b>	<b>Contributing</b>	<b>15</b>
7.1	Types of Contributions . . . . .	15
7.2	Pull Request Guidelines . . . . .	16
<b>8</b>	<b>Credits</b>	<b>17</b>
8.1	Development Lead . . . . .	17
8.2	Contributors . . . . .	17
<b>9</b>	<b>History</b>	<b>19</b>
9.1	0.1.0 (2019-07-30) . . . . .	19
<b>10</b>	<b>Indices and tables</b>	<b>21</b>
	<b>Python Module Index</b>	<b>23</b>
	<b>Index</b>	<b>25</b>

## 1.1 Features

**Current features include:**

- conda ready
- pytest unit test
- continous integration
- coverall code coverage
- documentation with sphinx
- documentation on readthedocs

## INSTALLATION

todo

## USAGE

To use `py_tools` in a project:

```
import py_tools
```

## EXAMPLES

---

**Note:** Click [here](#) to download the full example code

---

### 4.1 This is my example script

This example doesn't do much, it just makes a simple plot

Out:

```
my variable is 2
my variable plus 2 is 4
```

```
###
# This is a section header
# -----
# This is the first section!
# The `###` signifies to Sphinx-Gallery that this text should be rendered as
# rST and if using one of the above IDE/plugin's, also signifies the start of a
# 'code block'.

import pytools

# This line won't be rendered as rST because there's a space after the last block.
myvariable = 2
print("my variable is {}".format(myvariable))
# This is the end of the 'code block' (if using an above IDE). All code within
# this block can be easily executed all at once.

###
# This is another section header
# -----
#
# In the built documentation, it will be rendered as rST after the code above!
# This is also another code block.

print('my variable plus 2 is {}'.format(myvariable + 2))
```

**Total running time of the script:** ( 0 minutes 0.017 seconds)

---

**Note:** Click [here](#) to download the full example code

---

## 4.2 This is my example script

This example doesn't do much, it just makes a simple plot

Out:

```
my variable is 2
my variable plus 2 is 4
```

```
###
# This is a section header
# -----
# This is the first section!
```

(continues on next page)

(continued from previous page)

```
# The `#%%` signifies to Sphinx-Gallery that this text should be rendered as
# rST and if using one of the above IDE/plugin's, also signifies the start of a
# 'code block'.

import py_tools

# This line won't be rendered as rST because there's a space after the last block.
myvariable = 2
print("my variable is {}".format(myvariable))
# This is the end of the 'code block' (if using an above IDE). All code within
# this block can be easily executed all at once.

#%%
# This is another section header
# -----
#
# In the built documentation, it will be rendered as rST after the code above!
# This is also another code block.

print('my variable plus 2 is {}'.format(myvariable + 2))

#%%
# This is another section header
# -----
#
# Plots look nice in examples
import matplotlib.pyplot as plt

plt.plot([1,23,2,4])
plt.ylabel('some numbers')

plt.show()
```

**Total running time of the script:** ( 0 minutes 0.105 seconds)

**Note:** Click [here](#) to download the full example code

## THIS IS MY EXAMPLE SCRIPT

This example doesn't do much, it just makes a simple plot

Out:

```
my variable is 2
my variable plus 2 is 4
```

```
###
# This is a section header
# -----
# This is the first section!
# The `###` signifies to Sphinx-Gallery that this text should be rendered as
# rST and if using one of the above IDE/plugin's, also signifies the start of a
# 'code block'.

import pytools

# This line won't be rendered as rST because there's a space after the last block.
myvariable = 2
print("my variable is {}".format(myvariable))
# This is the end of the 'code block' (if using an above IDE). All code within
# this block can be easily executed all at once.

###
# This is another section header
# -----
#
# In the built documentation, it will be rendered as rST after the code above!
# This is also another code block.

print('my variable plus 2 is {}'.format(myvariable + 2))
```

**Total running time of the script:** ( 0 minutes 0.018 seconds)

## 6.1 py\_tools

### 6.1.1 py\_tools package

#### Subpackages

#### py\_tools.cli package

#### Submodules

#### py\_tools.cli.main module

#### Module contents

#### Submodules

#### py\_tools.version module

#### Module contents

```
py_tools.pure_python()  
    hello
```

## **CONTRIBUTING**

Contributions are welcome, and they are greatly appreciated! Every little bit helps, and credit will always be given. You can contribute in many ways:

### **7.1 Types of Contributions**

#### **7.1.1 Report Bugs**

Report bugs at [https://github.com/DerThorsten/py\\_tools/issues](https://github.com/DerThorsten/py_tools/issues).

If you are reporting a bug, please include:

- Your operating system name and version.
- Any details about your local setup that might be helpful in troubleshooting.
- Detailed steps to reproduce the bug.

#### **7.1.2 Fix Bugs**

Look through the GitHub issues for bugs. Anything tagged with “bug” and “help wanted” is open to whoever wants to implement it.

#### **7.1.3 Implement Features**

Look through the GitHub issues for features. Anything tagged with “enhancement” and “help wanted” is open to whoever wants to implement it.

#### **7.1.4 Write Documentation**

py\_tools could always use more documentation, whether as part of the official py\_tools docs, in docstrings, or even on the web in blog posts, articles, and such.

#### **7.1.5 Submit Feedback**

The best way to send feedback is to file an issue at [https://github.com/DerThorsten/py\\_tools/issues](https://github.com/DerThorsten/py_tools/issues).

If you are proposing a feature:

- Explain in detail how it would work.
- Keep the scope as narrow as possible, to make it easier to implement.
- Remember that this is a volunteer-driven project, and that contributions are welcome :)

## 7.2 Pull Request Guidelines

Before you submit a pull request, check that it meets these guidelines:

1. The pull request should include tests.
2. If the pull request adds functionality, the docs should be updated. Put your new functionality into a function / classes with a proper documentation, and add the feature to the list in README.rst.

CREDITS

## 8.1 Development Lead

- Thorsten Beier <[derthorstenbeier@gmail.com](mailto:derthorstenbeier@gmail.com)>

## 8.2 Contributors

None yet. Why not be the first?

## HISTORY

### 9.1 0.1.0 (2019-07-30)

- First release on PyPI.
