Phasellus vitae congue leo. Curabitur non consectetur urna. Ut volutpat lacus et ligula eleifend vitae facilisis ligula aliquam. Maecenas massa leo, mollis a rutrum ut, posuere rhoncus massa. Quisque condimentum nisi et metus gravida suscipit. Ut sagittis auctor est, a viverra metus tristique id. Duis fermentum dapibus bibendum. Curabitur ut scelerisque felis. Vestibulum sit amet justo libero, vel fermentum lacus.
Nunc ipsum risus, viverra eu lobortis at, dapibus id est. Nullam molestie ultricies tempus. Nullam viverra, est non porta blandit, orci purus eleifend tortor, volutpat sollicitudin quam tortor et orci. In quis sapien sed nulla accumsan interdum. Cras quis turpis id lorem aliquam tempor in sed mauris. Proin vehicula scelerisque ligula, at fringilla leo rutrum eget. Sed malesuada urna ac nibh sollicitudin a ornare metus luctus. Vivamus imperdiet, nibh non hendrerit convallis, tortor neque cursus eros, bibendum tristique odio eros sed ante. Praesent rhoncus nibh eu quam fringilla auctor. Suspendisse arcu est, aliquet id volutpat at, rutrum sit amet orci. Phasellus et nibh vitae nibh porttitor sagittis vel sit amet velit. Etiam a ipsum vel ante euismod congue. Donec ut facilisis justo. Nulla ullamcorper, lectus a porttitor

CHAPTER 1

Contents

What is Radpress?

Radpress is a simple blog application for Djangonauts. It doesn't use WYSIWYG editor. The default markup syntax is reStructuredText and you can preview your entry simply before published it.

Features

- Zen mode for writing articles
- Disqus support for comment and reactions
- Useful sidebar widgets; tag cloud, latest posts
- Adding page links in navigation bar
- Listing archives for date or tag
- Author information for articles
- Simple theme like as Octopress.

Requirements

- Django >= 1.4
- docutils >= 0.9 *# for reStructuredText*
- Pygments >= 1.5 *# for highlighting code syntax*
- easy-thumbnails >= 1.0.3
- and Pillow or PIL

Installation

You can install Radpress with *pip* or *easy_install*:

```
pip install radpress
```

It also installs it's dependencies, but you need some configuration after package installation. In your django project, you should add `easy_thumbnails` before `radpress`.

Python Imaging Library

We prefer Pillow in stage of development. But it's not added to `setup.py` as mandatory dependency. You want to continue to use PIL in your project. This and `easy-thumbnails` is required to add image for articles, and cropping and resizing images.

Configuration

RADPRESS_TITLE

Set your blog title.

Default: "Radpress"

RADPRESS_DESCRIPTION

Set your blog description.

Default: "A blogging application for Djangonauts"

RADPRESS_LIMIT

Set blog entry count in a page.

Default: 5

RADPRESS_GA_CODE

Set Google Analytics code to enable support.

Default: None

RADPRESS_DISQUS

Set shortname if you want to enable Disqus comments support.

Default: None

RADPRESS_HIDE_EMAIL

If you define this variable as "False", author emails can be visible in RSS or only author name seems.

Default: True

Development

Thanks in advance for the contribution! Please start with installing requirements for the development:

```
$ pip install -r requirements/development.txt
```

Then, see the issues in Github: https://github.com/gkmngrgn/radpress/issues

If you want to send your changes to us, create your fork, open the branch about your changes, commit them and send a pull request. That's all.

LESS Usage

Do NOT try to edit `main.css` file directly. Learn LessCSS and edit less files that you can find them it `static/radpress_less` directory. To compile less files and convert to css:

```
$ fab compile_less
```

JS Components

jquery.js

I am not a frontend developer, but jQuery seems very easy and some javascript libraries need to jQuery.

http://jquery.com/

taboverride.min.js

It's required to override tab behaviour in zen mode textarea.

http://wjbryant.github.io/taboverride/

Architect

There are two ways to update or save publishing status, title, slug or other entry fields. The end user should be use customized form (named ZenModeForm) to add or update an article information. But if you want to update entry model object directly, metadata will be update for object fields:

```
form --> model
- update fields for content metadata

model --> form
- update metadata for fields
```

Some metadata elements should be required in content field:

- title
- slug

Optional elements:

- tags
- is_published (default: false)
- image

Edit
Django İçin IDE Kullanmak
django
python
editör
IDE
pycharm
IDE'nin açılımı Integrated Development Environment, yani bütünleşik geliştirme ortamı. Django ve Python camiasında sıklıkla konuşulan şeylerden biri de, IDE'nin gerekli olup olmadığı. Hangi dil olursa olsun bir geliştiricinin mutlaka bir geliştirme ortamına ihtiyacı vardır. Bütünleşik olması ise bir tercih meselesidir.
Django üzerinden bir örnekleme yapacak olursak, ihtiyacımız olan bazı şeyler şunlar:
Bir adet terminal uygulaması, olmazsa olmazımız
Kodumuzu yazarken kullanacağımız; renklendirme, otomatik tamamlama gibi hoş özellikleri olan bir editör
VCS kontrolü için kullanacağımız bir istemci; git terminal arayüzü, sourcetree vs.
Veritabanı tablolarını görüntülemek için bir istemci; yine terminal arayüzü veya sqliteman vs.
Belki modellerimizi grafik halinde görüntülemek için, graphviz, yFiles
Belki deployment için birkaç yardımcı araç; Fabric, SSH, vagrant (hazır sunucu kalıbı oluşturmak için) vs.
Debug ve test araçları; pdb, ipython vs.
Bir web uygulaması geliştirmek için çokça enstrümana ihtiyacımız var. Bu ihtiyaçlarımızın büyük bir kısmı bir terminal uygulaması ile karşılanabilir. İşte bu tercih, sizin IDE veya editör seçiminizi asıl etkileyen sevdir. Eğer yaptığınız değişiklikleri görmek, uzaktaki sunucuya göndermek için
