
randstr Documentation

Release 0.1.2

Eric Larson

September 13, 2016

1	Usage	3
----------	--------------	----------

Sometimes you just want a random string. For those times, there is *randstr*.

Usage

The default is a 7 character string composed of *a-z0-9*.

```
from randstr import randstr  
  
print(randstr())
```

You can get a longer string by passing in a length argument.

```
randstr(19)
```
