
Reddit-Image-Scraper Documentation

Release 1.0

Rookey

Nov 14, 2017

Contents

1	Documentation	3
1.1	Requirements	3
1.2	Usage	3
2	Indices and tables	5

Contents:

1.1 Requirements

The following tools are needed to build the documentation

- sphinx
- sphinx_rtd_theme

To install all the requirements simply use pip while currently in the docs directory

```
pip install -r requirements.txt
```

This will install all the necessary dependencies.

1.2 Usage

The documentation gets built using make, and comes in several flavors.

`make html` - build the API and narrative documentation web pages, this is the the default make target, so running just `make` is equivalent to `make html`.

`make html_noapi` - same as above, but without running the auto-generated API docs. When you are working on the narrative documentation, the most time consuming portion of the build process is the processing and rendering of the API documentation. This build target skips that.

You can run `make help` to see information on all possible make targets.

CHAPTER 2

Indices and tables

- `genindex`
- `modindex`
- `search`
