## redish - Pythonic Redis abstraction built on top of redis-py

---

**Version** 0.0.1

### Introduction

**Braindump:**

```
>>> from redish.client import Client
>>> x = Client()

# Key/Value
>>> x["foo"] = {"name": "George"}
>>> x["foo"]
{'name': 'George'}
>>> del(x["foo"])
>>> x["foo"]
Traceback (most recent call last):
File "<stdin>", line 1, in <module>
File "redish/client.py", line 52, in __getitem__
    raise KeyError(key)
KeyError: 'foo'

# Sets

>>> s = x.Set("myset")
>>> map(s.add, ["opera", "firefox", "ie", "safari"])
[True, True, True, True]
>>> "opera" in s
True
>>> s.remove("safari")
>>> "safari" in s
False
>>> list(s)
['opera', 'ie', 'firefox']
```

```
>>> s2 = x.Set("myset2")
>>> map(s2.add, ["opera", "firefox", "mosaic"])
[True, True, True]
>>> s.difference(s2)
set(['opera', 'firefox', 'mosaic'])

# Sorted Set

>>> z = x.SortedSet("myzset")
>>> z.add("foo", 0.9)
True
>>> z.add("bar", 0.1)
True
>>> z.add("baz", 0.3)
True
>>> z[0:3]
['bar', 'baz', 'foo']
```

## Installation

You can install `redish` either via the Python Package Index (PyPI) or from source.

To install using `pip`,:

```
$ pip install redish
```

To install using `easy_install`,:

```
$ easy_install redish
```

If you have downloaded a source tarball you can install it by doing the following,:

```
$ python setup.py build
# python setup.py install # as root
```

## Examples

**Release** 0.0

**Date** Sep 14, 2017

**Database - `redish.client`**

**Datatypes - `redish.types`**

**Models - `redish.models`**

**Serialization - `redish.serialization`**

**Utilities - `redish.utils`**

`redish.utils.dt_to_timestamp(dt)`

Convert `datetime` to UNIX timestamp.

`redish.utils.maybe_datetime(timestamp)`

Convert `datetime` to timestamp, only if `timestamp` is a `datetime` object.

## CHAPTER 3

---

### Change History

---

#### **0.0.1 [2010-04-29 04:40 P.M CET]**

- Initial release.

## CHAPTER 4

---

### Indices and tables

---

- `genindex`
- `modindex`
- `search`

**r**

`redish.utils`, 5

## D

`dt_to_timestamp()` (in module `redish.utils`), 5

## M

`maybe_datetime()` (in module `redish.utils`), 5

## R

`redish.utils` (module), 5
