# **schematics-xml Documentation**

*Release 0.2.1*

**Alex Hayes**

November 11, 2016

<b>1</b>	<b>Contents</b>	<b>3</b>
<b>2</b>	<b>License</b>	<b>9</b>
<b>3</b>	<b>Author</b>	<b>11</b>
	<b>Python Module Index</b>	<b>13</b>

Python schematics models for converting to and from XML.

## 1.1 Installation

You can install `schematics-xml` either via the Python Package Index (PyPI) or from github.

To install using pip;

```
$ pip install schematics-xml
```

From github;

```
$ pip install git+https://github.com/alexhayes/schematics-xml.git
```

Currently `schematics-xml` only supports Python 3 - if you'd like feel free to submit a PR adding support for Python 2, however note that I love type annotations and any Python 2 PR will need to include a stub file.

## 1.2 Usage

Simply inherit `XMLModel`.

```
from schematics_xml import XMLModel

class Person(XMLModel):
    name = StringType()

john = Person(dict(name='John'))

xml = john.to_xml()
```

XML now contains;

```
<?xml version='1.0' encoding='UTF-8'?>
<person>
  <name>John</name>
</person>
```

And back the other way;

```
john = Person.from_xml(xml)
```

## 1.2.1 Root Node

To set the root node simply define class property `xml_root`, as follows;

```
from schematics_xml import XMLModel

class Animal(XMLModel):
    kind = StringType()

    @property
    def xml_root(self):
        return self.kind

garfield = Animal(dict(kind='cat'))

xml = garfield.to_xml()
```

XML now contains;

```
<?xml version='1.0' encoding='UTF-8'?>
<cat>
  <kind>cat</kind>
</cat>
```

## 1.2.2 Encoding

By default the encoding returned `XMLModel.to_xml()` is `UTF-8` however this can be changed either by setting the `xml_encoding` attribute on the model or by setting the `encoding` kwarg when calling `XMLModel.to_xml()`.

```
from schematics_xml import XMLModel

class Animal(XMLModel):
    xml_encoding = 'UTF-8'
    kind = StringType()

garfield = Animal(dict(kind='cat'))

xml = garfield.to_xml()
```

XML now contains;

```
<?xml version='1.0' encoding='UTF-8'?>
<cat>
  <animal>cat</animal>
</cat>
```

## 1.3 Developer Documentation

### 1.3.1 Contributions

Contributions are more than welcome!

To get setup do the following;

```
mkvirtualenv --python=/usr/bin/python3.5 schematics-xml
git clone https://github.com/alexhayes/schematics-xml.git
cd schematics-xml
pip install -r requirements/dev.txt
pip install Django>=1.9,<1.10
```

### 1.3.2 Running Tests

Once you've checked out you should be able to run the tests;

```
tox
```

Or run all environments at once using detox;

```
detox
```

### 1.3.3 Creating Documentation

```
cd docs
make clean html
```

## 1.4 Internal Module Reference

**Release** 0.2.1

**Date** November 11, 2016

### 1.4.1 `schematics_xml` package

#### Subpackages

`schematics_xml.tests` package

#### Submodules

`schematics_xml.tests.test_models` module

#### Module contents

#### Submodules

`schematics_xml.models` module

`schematics_xml.models`

Base models that provide to/from XML methods.

**class** `schematics_xml.models.XMLModel` (*raw\_data=None, trusted\_data=None, deserialize\_mapping=None, init=True, partial=True, strict=True, validate=False, app\_data=None, \*\*kwargs*)

Bases: `schematics.models.Model`

A model that can convert it's fields to and from XML.

**classmethod** `from_xml` (*xml: str*) → `schematics.models.Model`

Convert XML into a model.

**Parameters** `xml` – A string of XML that represents this Model.

**primitive\_to\_xml** (*primitive: dict, parent: 'lxml.etree.\_Element'=None*)

**primitive\_value\_to\_xml** (*key, parent, value*)

**to\_xml** (*role: str=None, app\_data: dict=None, encoding: str=None, \*\*kwargs*) → `str`

Return a string of XML that represents this model.

Currently all arguments are passed through to `schematics.Model.to_primitive`.

#### Parameters

- **role** – schematics Model to\_primitive role parameter.
- **app\_data** – schematics Model to\_primitive app\_data parameter.
- **encoding** – xml encoding attribute string.
- **kwargs** – schematics Model to\_primitive kwargs parameter.

**xml\_encoding** = 'UTF-8'

Override this attribute to set the encoding specified in the XML returned by `XMLModel.to_xml()`.

**xml\_root**

Override this attribute to set the XML root returned by `XMLModel.to_xml()`.

`schematics_xml.models.ensure_lists_in_model` (*raw\_data: dict, model\_cls: schematics\_xml.models.XMLModel*)

Ensure that single item lists are represented as lists and not dicts.

In XML single item lists are converted to dicts by `xmltodict` - there is essentially no way for `xmltodict` to know that it *should* be a list not a dict.

#### Parameters

- **raw\_data** –
- **model\_cls** –

`schematics_xml.models.ensure_lists_in_value` (*value: 'typing.Any', field: schematics.types.base.BaseType*)

`schematics_xml.models.field_has_type` (*needle: schematics.types.base.BaseType, field: schematics.types.base.BaseType*) → `bool`

Return True if field haystack contains a field of type needle.

#### Parameters

- **needle** – A schematics field class to search for.
- **haystack** – An instance of a schematics field within a model.

`schematics_xml.models.model_has_field_type` (*needle: schematics.types.base.BaseType, haystack: schematics.models.Model*) → `bool`

Return True if haystack contains a field of type needle.

Iterates over all fields (and into field if appropriate) and searches for field type *needle* in model *haystack*.

### Parameters

- **needle** – A schematics field class to search for.
- **haystack** – A schematics model to search within.

### Module contents

Python schematics models for converting to and from XML.

**class** `schematics_xml.VersionInfo` (*major, minor, micro, releaselevel, serial*)

Bases: `tuple`

**major**

Alias for field number 0

**micro**

Alias for field number 2

**minor**

Alias for field number 1

**releaselevel**

Alias for field number 3

**serial**

Alias for field number 4

### 1.4.2 `schematics_xml`
