# **seth Documentation**

***Release 0.1***

**Jacek Nosal**

March 30, 2016

<b>1</b>	<b>Tutorial</b>	<b>3</b>
<b>2</b>	<b>Core API</b>	<b>5</b>
<b>3</b>	<b>Classy Api</b>	<b>7</b>
<b>4</b>	<b>Tweens Api</b>	<b>9</b>
<b>5</b>	<b>DB Api</b>	<b>11</b>
<b>6</b>	<b>Helpers Api</b>	<b>13</b>
<b>7</b>	<b>Indices and tables</b>	<b>15</b>

**Seth** is a set of utilities for working with Pyramid framework. It provides components such as: class-based-views, pagination, custom renderers, uploading utility, command utility, filtering utility and couple of tweens. To install run:

```
$ pip install -U seth
```

Seth's components also have some additional dependencies

1. Pdf renderer requires **xhtml2pdf** and for instance **pyramid\_jinja2** to work properly:

```
$ pip install -U xhtml2pdf==0.0.5 && pip install -U reportlab==2.7 && pip install -U pyramid_jinja2==
```

2. You may want to replace marshmallow with colander, so:

```
$ pip install -U colander
```

**Tutorial** A quick **Seth** tutorial & overview.

**Core API** The complete API documentation.
