## # Vizier DB - Web User Interface

This repository contains the code for the Vizier DB Web User Interface. This project was bootstrapped with [Create React App](<https://github.com/facebookincubator/create-react-app>). For more information on how to perform common tasks [refer to this guide](<https://github.com/facebookincubator/create-react-app/blob/master/packages/react-scripts/template/README.md>).

### ## Install and Run

Start by cloning the repository and switching to the app directory.

```
` git clone https://github.com/VizierDB/web-ui.git cd web-ui `
```

Inside the app directory, you can run several commands:

#### #### Install build dependencies

```
` yarn install `
```

#### #### Start the development server ` yarn start `

#### #### Bundles the app into static files for production ` yarn build `

#### #### Additional Commands

Starts the test runner. ` yarn test `

Remove this tool and copies build dependencies, configuration files and scripts into the app directory. If you do this, you can't go back! ` yarn eject `

### ## Configuration

The UI app connects to the Web API server. The Url for the server is currently hard-coded in the file `public/env.js`. Before running `yarn start` adjust the Url to point to a running Web API server. By default a local server running on port 5000 is used.
