#### 1.1 Installation

pip install tam

#### 1.2 Documentation

https://tam.readthedocs.org/

# 1.3 Development

To run the all tests run:

Note, to combine the coverage data from all the tox environments run:

Windows	set PYTEST_ADDOPTS=cov-append tox
Other	PYTEST_ADDOPTS=cov-append tox

~				_	
CH.	А	PΙ	E	к	_

Installation

#### At the command line:

pip install tam

$\sim$	<b>⊔</b> ∧	D	re	D	3
G	7	١P٦	ᇉ	к	J

Usage
To use tam in a project:
import tam

6 Chapter 3. Usage

CHAPTE	₹ 4
--------	-----

## Reference

# 4.1 tam

#### Contributing

Contributions are welcome, and they are greatly appreciated! Every little bit helps, and credit will always be given.

#### 5.1 Bug reports

When reporting a bug please include:

- Your operating system name and version.
- Any details about your local setup that might be helpful in troubleshooting.
- Detailed steps to reproduce the bug.

#### 5.2 Documentation improvements

tam could always use more documentation, whether as part of the official tam docs, in docstrings, or even on the web in blog posts, articles, and such.

#### 5.3 Feature requests and feedback

The best way to send feedback is to file an issue at https://github.com/luizirber/tam/issues.

If you are proposing a feature:

- Explain in detail how it would work.
- Keep the scope as narrow as possible, to make it easier to implement.
- Remember that this is a volunteer-driven project, and that code contributions are welcome:)

## 5.4 Development

To set up tam for local development:

- 1. Fork tam (look for the "Fork" button).
- 2. Clone your fork locally:

```
git clone git@github.com:your_name_here/tam.git
```

3. Create a branch for local development:

```
git checkout -b name-of-your-bugfix-or-feature
```

Now you can make your changes locally.

4. When you're done making changes, run all the checks, doc builder and spell checker with tox one command:

tox

5. Commit your changes and push your branch to GitHub:

```
git add .
git commit -m "Your detailed description of your changes."
git push origin name-of-your-bugfix-or-feature
```

6. Submit a pull request through the GitHub website.

#### 5.4.1 Pull Request Guidelines

If you need some code review or feedback while you're developing the code just make the pull request.

For merging, you should:

- 1. Include passing tests (run tox)<sup>1</sup>.
- 2. Update documentation when there's new API, functionality etc.
- 3. Add a note to CHANGELOG.rst about the changes.
- 4. Add yourself to AUTHORS.rst.

#### 5.4.2 Tips

To run a subset of tests:

```
tox -e envname -- py.test -k test_myfeature
```

To run all the test environments in parallel (you need to pip install detox):

detox

<sup>&</sup>lt;sup>1</sup> If you don't have all the necessary python versions available locally you can rely on Travis - it will run the tests for each change you add in the pull request.

It will be slower though ...
