3

A Python API for interacting with the Tron (TRX)

1.1 Quickstart

- *Installation*
- *Using TronAPI*
- *Getting Blockchain Info*

Note: All code starting with a \$ is meant to run on your terminal. All code starting with a >>> is meant to run in a python interpreter, like [ipython](#).

1.1.1 Installation

TronAPI can be installed (preferably in a virtualenv) using pip as follows:

```
$ pip install tronapi
```

Note: If you run into problems during installation, you might have a broken environment. See the troubleshooting guide to [setup_environment](#).

Installation from source can be done from the root of the project with the following command.

```
$ pip install .
```

1.1.2 Using TronAPI

To use the tron library you will need to initialize the `tronapi` class.

```
>>> from tronapi.tron import Tron
>>> full_node = HttpProvider('https://api.trongrid.io')
>>> solidity_node = HttpProvider('https://api.trongrid.io')
>>> event_server = 'https://api.trongrid.io'
>>>
>>> tron = Tron(full_node, solidity_node, event_server)
>>> tron.default_block = 'latest'
```

1.1.3 Getting Blockchain Info

It's time to start using TronAPI for Python! Try getting all the information about the latest block.

```
>>> tron.get_block('latest')
>>> {
"blockID": "00000000003a5bbda4aea15cb5d99230674463e9d5f2c0c647316839b25fd5b9",
