# **Bloc Hub Documentation**

***Release 0.0.1***

**SecureKey Technologies Inc.**

**Jun 11, 2019**

---

## Contents

---

<b>1</b>	<b>Introduction</b>	<b>3</b>
<b>2</b>	<b>Have Questions?</b>	<b>5</b>

Bloc-hub is Golang implementation of an [DIF Identity Hub](#).

# CHAPTER 1

---

## Introduction

---

The Identity Hub is performing three distinct functions:

- Permissioned, object storage API - see the [Explainer](#).
- Management of the lifecycle of the user's Agents - see [Identity Hub Attestation Flows and Components](#).
- **DID-based authentication (DID Auth)** - see [Hub Authentication](#), [did-auth-jose](#).
  - Similar to OIDC (OpenID Connect), but with Authenticated Encryption and DID resolution to fetch the keys in order to verify the client's signature on the request.
  - An access token is issued to the client if successfully authenticated.

TODO

## CHAPTER 2

---

### Have Questions?

---

We try to maintain a comprehensive set of documentation for various audiences. However, we realize that often there are questions that remain unanswered. For any technical questions relating to TrustBloc not answered here, please use [Gitter](#) (an alternative to Slack) on the `#trustbloc-questions` channel.

---

**Note:** Please, when asking about problems you are facing tell us about the environment in which you are experiencing those problems including the OS, which version of Docker you are using, etc.
