## Contents

1. Tarif Code .................................................. 3
2. Duty Rate ................................................... 5
The customs module allows to define customs duty based on the tariff code.
It stores the **Harmonized System** that can be set on *Product*.

- The *Code* from the HS.
- The *Country* in case of a country specific code.
- The *Start / End* period of the year for which the code is valid.
It stores the rate of a Tarif Code for a country over a period.

- The Tariff Code.
- The Country for which the rate is.
- The Type: Import or Export
- The Start and End date of validity.

**The Computation Type:**

- Amount: fixed amount with currency.
- Quantity: amount (in currency) per unit of measure.
