## Contents

---

<b>1</b>	<b>User</b>	<b>3</b>
<b>2</b>	<b>Configuration</b>	<b>5</b>

The web\_user module provides facilities to manage external user accessing from the web.

# CHAPTER 1

---

## User

---

A user is uniquely identified by an email and he is authenticated using a hashed password. The user can be linked to a Party.

Two actions are available:

- The *Validate E-mail* which sent an e-mail to the user with a link to an URL that ensures the address exists.
- The *Reset Password* which sent an e-mail to the user with a link to an URL to set a new password.

The `web_user` module uses parameters from different sections:

- *web*:
  - *reset\_password\_url*: the URL to reset the password to which the parameters *email* and *token* will be added.
  - *email\_validation\_url*: the URL for email validation to which the parameter *token* will be added.
- *email*:
  - *from*: the origin address to send emails.
- *session*:
  - *web\_timeout*: defines in seconds the validity of the web session. Default: 30 days.
  - *web\_timeout\_reset*: in seconds the validity of the reset password token. Default: 1 day.
