txTwitter Documentation

Release latest

April 26, 2015

Contents

A Twisted-based client library for Twitter's API.

Status

Very alpha, but probably usable if the functionality you need has been implemented.

Currently very incomplete (only a small number of API calls are supported), but the architecture seems sound. All remaining API calls have `TODO` notes.

There are some moderately comprehensive docstrings in the code, but proper documentation still needs to be written.
