CHAPTER 1

Introduction

pyiiif is a library for working with

It provides a pythonic interface to generating IIIF Presentation API records. The purpose is to reduce the amount of typing required and reduce amount of errors in creating large numbers of IIIF records.

A person with a nominal amount of programming experience can create a IIIF record by simply typing the following:

And, you have a properly formatted IIIF Manifest record with the correct @context, @type and @id attributes as well as a a label and a description. The sequence list will be empty for now. From here, you just need to write the string into a dicitonary

pyiiif: Library code for working with the IIF specifications

`pyiiif.utils.convert_context_url_into_lookup(a_url)`

tries to look up a IIF context url in the key value of the `valid_contexts` dict

If cannot find the url will return `None` else will return the right key for defining a context value on a record

:rtype `None` or `str`

`pyiiif.utils.escape_identifier(identifier)`

Escapes a string identifier for inclusion in a URL

Parameters `identifier` (*str*) – The identifier to escape

Return type `str`

Returns The identifier, escaped

`pyiiif.utils.unescape_identifier(identifier)`

Unescapes a string escaped by `escape_identifier()`

Parameters `identifier` (*str*) – The escaped identifier

Return type `str`

Returns The identifier, unescaped

exception `pyiiif.exceptions.ParameterError`

Raised when a IIF Image API Parameter is incorrect

`__init__`

Initialize self. See `help(type(self))` for accurate signature.

`with_traceback()`

Exception.with_traceback(tb) – set self.__traceback__ to tb and return self.

CHAPTER 3

Indices and tables

- `genindex`
- `modindex`
- `search`

p

pyiiif, 3
pyiiif.exceptions, 3
pyiiif.utils, 3

Symbols

`__init__` (*pyiiif.exceptions.ParameterError* attribute),
3

C

`convert_context_url_into_lookup()` (*in module pyiiif.utils*), 3

E

`escape_identifier()` (*in module pyiiif.utils*), 3

P

`ParameterError`, 3

`pyiiif` (*module*), 3

`pyiiif.exceptions` (*module*), 3

`pyiiif.utils` (*module*), 3

U

`unescape_identifier()` (*in module pyiiif.utils*), 3

W

`with_traceback()` (*pyiiif.exceptions.ParameterError* method), 3
