Release 0.0.1

Geoffrey Spear

December 13, 2015

1	The name	3
2	Contents:	5
3	Indices and tables	7

A roguelike game engine.

There's really nothing useful here yet. Please move along.

The name

In NetHack, a python is represented by a violet (or, ok, purple or magenta or something...) letter S. “violetS” didn’t look as nice.

It’s also a tribute to Violets everywhere, whether they’re unfortunate inventors, bratty kids whose love of chewing gum leads to tragedy, or what have you.

Contents:

Indices and tables

- `genindex`
- `modindex`
- `search`
