
zorg-grove Documentation

Release 0.0.1

Gunther Cox

Sep 27, 2017

Contents

1	Contents:	3
1.1	LCD Driver	3
1.2	Microphone Driver	4
1.3	Rotary Angle Sensor	4
1.4	Servo	4
1.5	Temperature Sensor	4
2	Overview	7
3	Installation	9
4	Usage	11
5	Indices and tables	13
	Python Module Index	15

CHAPTER 1

Contents:

LCD Driver

Documentation for the [Grove RGB LCD I2C driver](#).

class zorg_grove.lcd.**LCD** (*options, connection*)

Bases: zorg.driver.Driver

backlight_color (*red, green, blue*)

Set RGB color for the back light.

backlight_off ()

Turns off the back light. Does so by setting the color to black.

backlight_on ()

Turns on the back light. Does so by setting the color to white

blink_off ()

Turns off the cursor blinking character.

blink_on ()

Turns on the cursor blinking character.

clear ()

Clears display and returns cursor to the home position (address 0).

cursor_off ()

Turns off the cursor.

cursor_on ()

Turns on the cursor.

display_off ()

Sets Off of all display (D), cursor Off (C) and blink of cursor position character (B).

display_on ()

Sets On of all display (D), cursor On (C) and blink of cursor position character (B).

```
home()
    Returns cursor to home position.

print_string(characters)
    Prints characters on the LCD. Automatically wraps text to fit 16 character wide display.

set_cursor(col, row)
    Sets cursor position.

start()
```

Microphone Driver

Documentation for the [Grove Sound Sensor](#) driver.

```
class zorg_grove.microphone.Microphone(options, connection)
    Bases: zorg.driver.Driver

read_decibels()
    Returns the value of the current sound level in decibels.
```

Rotary Angle Sensor

Documentation for the [Grove Rotary Angle Sensor](#) driver.

```
class zorg_grove.rotary_angle_sensor.RotaryAngleSensor(options, connection)
    Bases: zorg.driver.Driver

    This may also be known as a potentiometer.

read_angle()
    Read and return the current angle of the sensor in degrees. The rotary angle sensor produces analog output
    between 0 and Vcc (D1).
```

Servo

Documentation for the [Grove Servo](#) driver.

```
class zorg_grove.servo.Servo(options, connection)
    Bases: zorg.driver.Driver

get_angle()
    Get the current angle of the servo motor.

set_angle(angle)
    Set the angle of the servo motor.
```

Temperature Sensor

Documentation for the [Grove Temperature Sensor](#) driver.

```
class zorg_grove.temperature_sensor.TemperatureSensor(options, connection)
    Bases: zorg.driver.Driver
```

read_celsius()

Read and return the celsius value of the temperature sensor. See data sheet: <http://www.seeedstudio.com/wiki/images/a/a1/NCP18WF104F03RC.pdf>

read_fahrenheit()

Read and return the fahrenheit value of the temperature sensor.

read_kelvin()

Read and return the kelvin value of the temperature sensor.

read_resistance()

Read and return the resistive value of the temperature sensor.

CHAPTER 2

Overview

This package includes python drivers for controlling hardware devices. Typically, this package will not be used directly. The normal usage would be to include it as a device driver when configuring a robot using [Zorg](#).

CHAPTER 3

Installation

Install this package using

```
pip install zorg-grove
```

CHAPTER 4

Usage

The driver should be included using the dot-notated format of the import string.

```
"zorg_grove.Servo"
```

CHAPTER 5

Indices and tables

- genindex
- modindex
- search

Python Module Index

Z

`zorg_grove.lcd`, 3
`zorg_grove.microphone`, 4
`zorg_grove.rotary_angle_sensor`, 4
`zorg_grove.servo`, 4
`zorg_grove.temperature_sensor`, 4

Index

B

backlight_color() (zorg_grove.lcd.LCD method), 3
backlight_off() (zorg_grove.lcd.LCD method), 3
backlight_on() (zorg_grove.lcd.LCD method), 3
blink_off() (zorg_grove.lcd.LCD method), 3
blink_on() (zorg_grove.lcd.LCD method), 3

C

clear() (zorg_grove.lcd.LCD method), 3
cursor_off() (zorg_grove.lcd.LCD method), 3
cursor_on() (zorg_grove.lcd.LCD method), 3

D

display_off() (zorg_grove.lcd.LCD method), 3
display_on() (zorg_grove.lcd.LCD method), 3

G

get_angle() (zorg_grove.servo.Servo method), 4

H

home() (zorg_grove.lcd.LCD method), 3

L

LCD (class in zorg_grove.lcd), 3

M

Microphone (class in zorg_grove.microphone), 4

P

print_string() (zorg_grove.lcd.LCD method), 4

R

read_angle() (zorg_grove.rotary_angle_sensor.RotaryAngleSensor method), 4
read_celsius() (zorg_grove.temperature_sensor.TemperatureSensor method), 4
read_decibels() (zorg_grove.microphone.Microphone method), 4

read_fahrenheit() (zorg_grove.temperature_sensor.TemperatureSensor method), 5
read_kelvin() (zorg_grove.temperature_sensor.TemperatureSensor method), 5
read_resistance() (zorg_grove.temperature_sensor.TemperatureSensor method), 5
RotaryAngleSensor (class in zorg_grove.rotary_angle_sensor), 4

S

Servo (class in zorg_grove.servo), 4
set_angle() (zorg_grove.servo.Servo method), 4
set_cursor() (zorg_grove.lcd.LCD method), 4
start() (zorg_grove.lcd.LCD method), 4

T

TemperatureSensor (class in zorg_grove.temperature_sensor), 4

Z

zorg_grove.lcd (module), 3
zorg_grove.microphone (module), 4
zorg_grove.rotary_angle_sensor (module), 4
zorg_grove.servo (module), 4
zorg_grove.temperature_sensor (module), 4
